BrewZilla 200L 3V

Wiring Diagram
RIMS INSTALLATION

The RIMS heating system is a separate part that is purchased as an add-on component to the brewery. The RIMS attaches to the brewery on the right hand side below the mash tun.

It will be required for you to run wiring from the RIMS to the main control box as shown below:
As shown in the image below the active wires for the RIMS need to be wired into the control box to the contactor that is connected to the RIMS PID controller.
