How to replace the Temp Control PCB on Series 4 Kegerator

KegLand Distribution PTY LTD

STEP 1

Undo screw on rear left of fridge
STEP 2

Undo screw on rear right hand side of fridge
STEP 3

Undo three screws that are above the top seal for the door.
STEP 4

Once those three screws are removed you can remove the plastic circuit board cover shown below.
STEP 5

Inside on the ceiling of the fridge remove the white plastic collet. This just unscrews and is a normal right hand thread.
STEP 6

Remove two screws on both sides of the door hinge.
STEP 7

The top plastic cover on the fridge should now just lift off.

The temp control module can now be inspected and/or replaced.
